CYBAGE
Accessing Elements – Tree Traversal
jQuery
Select 3rd 'li' that match within given jQuery object
var input=$("li").eq(2).css("background-color", "red");
The .map() method is particularly useful for getting or setting the value of a collection of elements and .get() on the result to work with a basic array:
$(":checkbox")
.map(function() {
return this.id;
})
.get()
.join();

CYBAGE
.on('load') vs .ready()
jQuery
To check if the DOM has loaded - .ready()
$('document').ready(function() {
// The DOM is ready!
});
$(function() {
// or use a shorter version...
});
To check if the page has fully loaded - .on('load')
$(window).on('load', function() {
// Do something ... after images, subframes etc. are loaded.
});

domManipulation.html
animation.html
animation.js
js > animation.js > ready() callback > click() callback
$(document).ready(
()=>{
$("button").click(function(){
$("p").animate({width:"100%"}).animate({fontSize:"46px"}).animate({borderWidth:30});
})
}
)

jQuery Method Chaining

- It makes your code short and easy to manage.
- It gives better performance.
- The chain starts from left to right. So left most will be called first and so on.

```
$(document).ready(function(){
   $("button").click(function(){
      $("p").animate({width:
"100%"}).animate({fontSize:
"46px"}).animate({borderWidth: 30});
   });
});
```

Copyright © 2018 Cybage Software Pvt. Ltd. All Rights Reserved. Cybage Confidential

```
$('document').ready(()=>{
    // $('button').click(()=>{
    //     $('p')
    //     .animate({width: "100%"})
    //     .animate({fontSize: "40px"})
    //     .animate({borderWidth:"20px"})
    // })

    $('button').click(()=>{
    $('p').toggle();})
})
```

```
var jqElement = $('#mydiv');

if (jqElement.length) {
        console.log('Element exists!');
}
